Prices: 1-year Grafts \$3.50 each

●

Heartnut

Juglans Cordiformis

The Heartnut has exceptional qualities. It bears fruit rather young; produces a heavy crop annually; and, it is one of the best shade trees. Also, the nuts crack easily with the meat coming out in halves.

Prices: 2-3' Each \$3.50

1-Year Grafts \$2.50

Hican

This tree is a cross between the Northern Hickory and the Southern Pecan. The tree is very hardy. The fruit has the shape of the Pecan and possesses a very thin shell.

↘ Bixby

↘ McAllister

4.50
Prices: 1-Year Grafts ~~\$3.50~~ each

●

Hickory

(Shagbark, *Carya ovata*)

↘ Bedell

The nuts ripen early and are very thin shelled. Also, this variety bears annually.

4.50
Prices: 1-Year Grafts ~~\$4.00~~ Each

●

Bernath

The largest Hickory I have seen in the East up to date. Thin-shelled, good solid meat, which cracks out well. Supply is limited.

5.50
Prices: 1-Year Grafts ~~\$5.00~~ Each

Can supply a limited number of the following:

CARPATHIAN ENGLISH WALNUT

Colby—1 yr. Grafts	@ 4.00

All Our Nut Trees, with the exception of Hickory and Chestnut, Are Grafted on Native Black Walnut Stock . . .

. . . which assures you of hardy trees that will adjust themselves to almost any soil condition. In order that these trees will have proper roots to promote rapid growth and early productivity, we scientifically develop a strong and vigorous root system. A small tree with heavy roots will attain greater height in a shorter time, than a newly-set-out tree which is taller, but lacks sufficient root fibres.

PLANTING GUIDE

When trees are received unpack them with care. Immediately heel them in the ground. As soon as possible dig the holes where the trees are to be planted. This hole must be large enough to spread all the roots out. Plant nut trees as deep as they were in the nursery. A dirt line will indicate where on the bark. If they are set a little deeper no harm is done, but do not set them shallow. The best fertilizer is well-rotted cow manure mixed with one good handful of agricultural lime for each tree. Mix this into the soil you use for planting the tree. Put a layer of this mixture into the hole; spread the roots on this and continue to fill the hole until top level is reached. While putting soil in, firm it around the tree and finish up by building a saucer-shaped ring around the tree for water.

Nut trees need water and good air circulation. Choose a high elevation if possible and do not fear cold weather. It will not harm them. Any place you would consider proper for a peach orchard will be ideal for nut trees also. Spring is the favorite planting time.
